

Overview of Ptolemy II

Edward A. Lee, PI
UC Berkeley

John Davis II, Elaine Cheong, Chamberlain Fong, Mudit Goel,
Christopher Hylands, Jörn Janneck, Bart Kienhuis, Jie Liu,
Xiaojun Liu, Lukito Muliadi, Stephen Neuendorffer, John Reekie,
Sonia Sachs, Niel Smyth, Mary P. Stewart, Jeff Tsay,
Brian K. Vogel, Paul Whitaker, Yuhong Xiong

Ptolemy Miniconference
Berkeley, CA, March 22-23, 2001

Status Update

- **Ptolemy II version 1.0 available**
 - A platform for experimentation, collaboration
 - Open source, open architecture
 - Rated code (red, yellow, green)
 - Core code is very high quality (green)
 - Code is written to be read
 - Extensible GUI (all red, currently)
- **Commercial support organization**
 - recently formed: Agile Design

Ptolemy Miniconference, Berkeley, 2

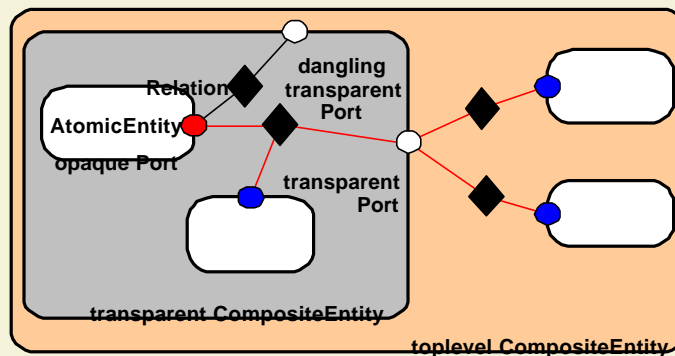

Components and their Relationships

The Ptolemy II kernel provides an *abstract syntax* - clustered graphs - that is well suited to a wide variety of component-based modeling strategies, ranging from state machines to process networks.

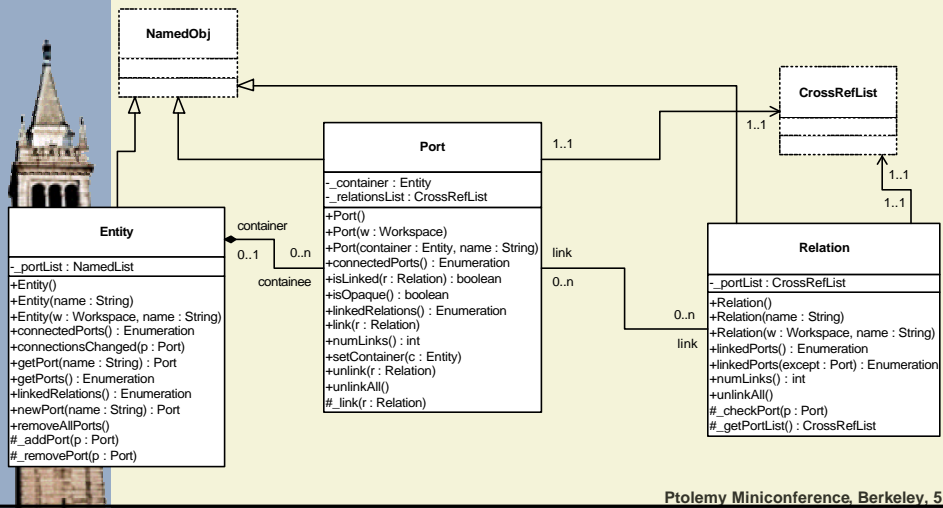

Ptolemy Miniconference, Berkeley, 3

Hierarchy - Construct components from finer grain components.

Ptolemy Miniconference, Berkeley, 4

Basic Kernel Classes

Actor Package – Infrastructure for Producer/Consumer Components

Basic Transport:

Services in the Infrastructure:

- broadcast
- multicast
- busses
- mutations
- clustering
- parameterization
- typing
- polymorphism

Ptolemy Miniconference, Berkeley, 6

Domains – Provide semantic models for component interactions

- CSP – concurrent threads with rendezvous
- CT – continuous-time modeling
- DE – discrete-event systems
- DDE – distributed discrete events
- FSM – finite state machines
- DT – discrete time (cycle driven) *
- Giotto – synchronous periodic *
- GR – 3-D graphics *
- PN – process networks
- RTOS – priority-driven reactive models *
- SDF – synchronous dataflow
- SR – synchronous/reactive **

* New domains in Ptolemy II

** Not yet realized in Ptolemy II

Ptolemy Miniconference, Berkeley, 7

SDF domain author:
Steve Neuendorffer

Synchronous Dataflow

The SDF domain does static dataflow analysis to construct compile-time schedules, and analyze for deadlock and bounded memory.

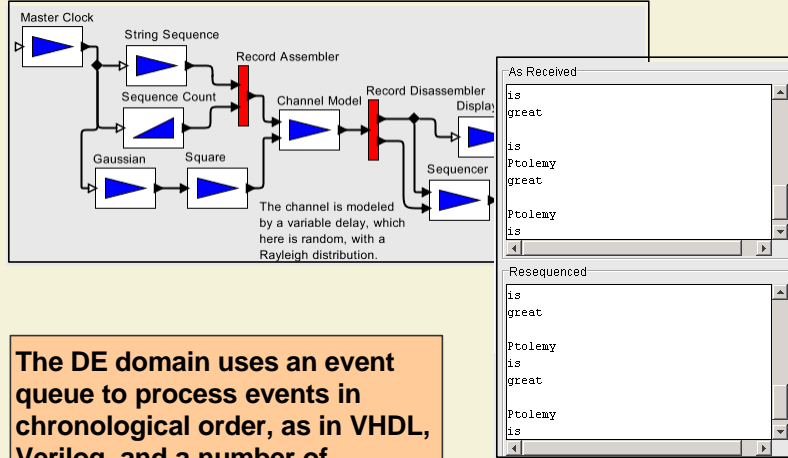

Ptolemy Miniconference, Berkeley, 8

DE domain authors:
Lukito Muliadi
Jie Liu

Discrete Event Models

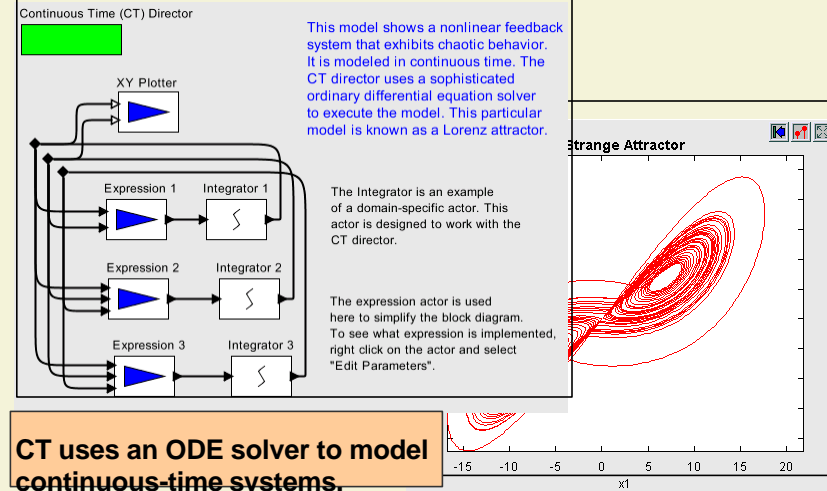

The DE domain uses an event queue to process events in chronological order, as in VHDL, Verilog, and a number of network simulation languages.

Ptolemy Miniconference, Berkeley, 9

CT domain author:
Jie Liu

Continuous Time Models

CT uses an ODE solver to model continuous-time systems.

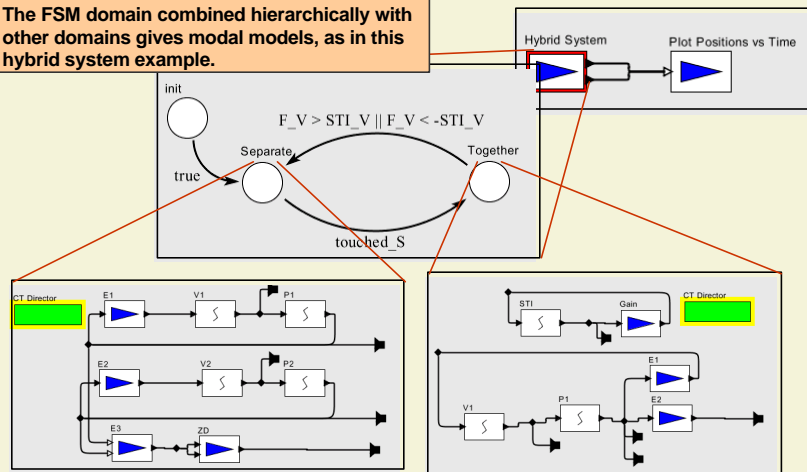

Ptolemy Miniconference, Berkeley, 10

FSM domain author:
Xiaojun Liu

Finite State Machines

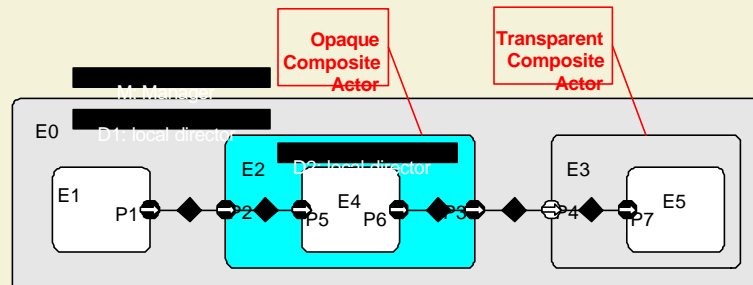

The FSM domain combined hierarchically with other domains gives modal models, as in this hybrid system example.

Ptolemy Miniconference, Berkeley, 11

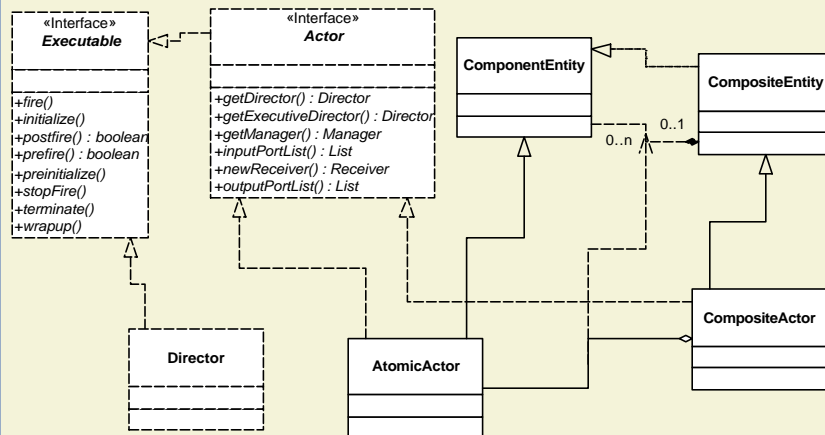

Hierarchical Heterogeneity

Directors are domain-specific. A composite actor with a director becomes opaque. The Manager is domain-independent.

Ptolemy Miniconference, Berkeley, 12

Basic Object Model for Executable Components

Ptolemy Miniconference, Berkeley, 13

Code Generator: "Shallow" and "Deep"

Code gen author:
Jeff Tsay

Code generator produces Java code from block diagrams.

The screenshot displays the 'codeGeneratorDemo.xml' application. The main window shows a block diagram with two components, 'Ramp1' and 'Display2', connected by a signal line. A 'Code Generator' dialog box is open, showing options for 'deep' (checked), 'show' (checked), 'compile' (checked), and 'run' (checked). The 'Generate' button is highlighted. Below the dialog, a terminal window shows the execution of the generated Java code, including the command 'java -classpath "/>

Ptolemy Miniconference, Berkeley, 14

Infrastructure Support

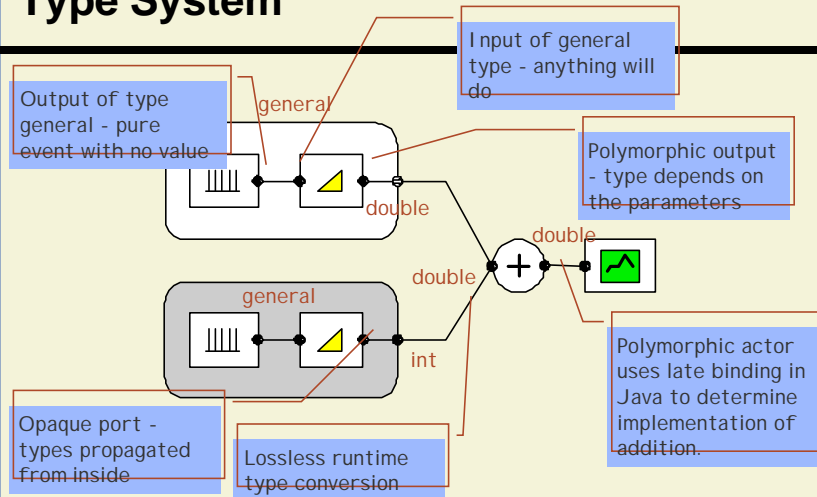

- **Vergil – visual editor** (Steve Neuendorffer)
- **MoML – XML schema** (Edward Lee, Steve Neuendorffer)
- **Expression language** (Neil Smyth, Xiaojun Liu)
- **Type system** (Yuhong Xiong)
- **Math package** (Jeff Tsay, Bart Kienhuis, William Wu)
- **Graph package** (Yuhong Xiong)
- **Plot package** (Edward Lee, Christopher Hylands)
- **3-D graphics** (Chamberlain Fong)
- **Actor library** (all)

Ptolemy Miniconference, Berkeley, 15

Type System

Type system author:
Yuhong Xiong

Ptolemy Miniconference, Berkeley, 16

Software Practice

- Object models in UML
- Design patterns
- Layered software architecture
- Design and code reviews
- Design document
- Nightly build
- Regression tests
- Sandbox experimentation
- **Code rating**

Ptolemy Miniconference, Berkeley, 17

Code rating

- A simple framework for
 - quality improvement by peer review
 - change control by improved visibility
- Four confidence levels
 - **Red.** No confidence at all.
 - **Yellow.** Passed design review. Soundness of the APIs.
 - **Green.** Passed code review. Quality of implementation.
 - **Blue.** Passed final review. Backwards-compatibility assurance.
